

Preparation & After Care

Aztek Sun Gun Exfoliate

It is recommended you exfoliate your skin to remove excess dry patches before your tanning session. This will help increase the length of your tan. The Aztek Sun Gun Exfoliate is a protein-based product that naturally exfoliates the skin without harsh particles that can scratch and dry the skin surface. This luxurious exfoliating treatment contains enzymes that remove dead skin cells naturally and gently, leaving the skin rejuvenated and smooth, ready for a Sun Gun tanning session.

Aztek Sun Gun Tanning Solutions

The Sun Gun solution is pre mixed and ready to use.

Sun Gun Solutions are available in 3 different types of tanning formulas:

Bronzing formula provides a rich, natural color during application, coloring your skin instantly, then darkens into a deep, even, natural tan.

Non-Bronzing formula provides a clear spray that darkens into a deep, dark natural tan after a short time.

Tanning Moisturizer formula provides a clear spray that darkens into a deep dark natural tan after a short time. The Sun Gun Tanning Moisturizer Mist leaves your client's skin feeling incredibly silky soft and smooth.

It is advisable to remove make-up, deodorant, perfume and jewelry before your treatment and tie your hair back or put on a protective cap. You may wear your own bathing suit for your "perfect tan lines" or the disposable bras/panties and/or men's briefs that are available. The Sun Gun tan will develop within 3 to 4 hours so we recommend you do not shower, bathe or engage in any vigorous exercise, that may cause you to perspire until the 3 to 4 hours have passed. When you do shower, the initial bronzing layer will actually wash off, revealing the most natural-looking tan imaginable.

Aztek Sun Gun Moisturize Mist

To keep your tan as long as possible (up to nine days, depending on skin type,) you should moisturize twice daily to help keep the skin silky soft.

The Aztek Sun Gun Moisturizer Mist will assist in prolonging your tan. The Aztek Sun Gun Moisturizer Mist leaves the skin feeling incredibly silky soft and replenished with moisture! Incorporating a blend of skin defining anti-oxidants that extend the life of your tan, this moisturizer will provide your skin with the ultimate natural hydration needed to extend the life of your tan.

SunGun®

The Easy To Use MicroMister

SunGun®

Attach hose to a compressor.

Twist red cap to unlock.

Pull red cap off of bottle.

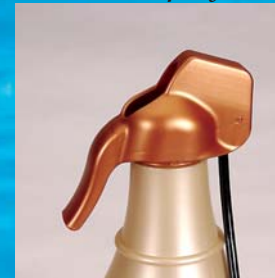

Align slots and press down onto sprayhead.

Twist sprayhead into locking position.

Unit ready to spray. Turn on air supply.

Trigger out, unit does not spray.

Press trigger completely to spray.

Spray 10 to 12 from subject.

FREQUENTLY ASKED QUESTIONS

Q. How does the Sun Gun System work?

The 16 oz. bottle of solution is attached to the Sun Gun Mist Head and with a source of air...you are ready to apply. It is that easy! The Sun Gun has a wide spray mist that covers the body without the defined lines that can be left by an airbrush. You just point the Sun Gun and mist! And remember there is no cleaning!

Q. What does the Sun Gun Easy Spray Formula contain?

The main ingredient is Dihydroxyacetone (or DHA as it is commonly referred to) that has been used in the cosmetic industry for over 30 years. DHA is manufactured from sugar and does not contain any potentially harmful chemicals. The Sun Gun Easy Spray Formula does not contain alcohol like many sunless tanning products on the market. Alcohol can have a drying effect on the skin. Our solution is water based and oil free.

Q. How does the Sun Gun Easy Spray Formula work?

The body's skin has live and dead skin cells. The DHA oxidizes and reacts on the dead skin cells, causing the melanin in your skin to turn a natural tan color. The live cells located under the dead cells have a barrier that cannot be penetrated by DHA.

Q. Is it safe?

Dermatologists are becoming more and more aware of the damaging effect of the sun and UV tanning. The Sun Gun is a safe way to get an all over natural tan without exposing the skin to harmful UV rays. The sunless alternative will help reduce the ever-increasing skin-cancer statistics.

Q. Can I be sprayed with the Sun Gun Easy Spray Formula if I am pregnant?

There are no harmful chemicals in the Sun Gun Easy Spray Formula. However, it is advisable to check with your doctor before booking your appointment.

Q. Will I be able to use the Sun Gun Easy Spray Formula if I have asthma, eczema or broken skin?

A Doctor's approval should be sought in all these circumstances.

Q. What will happen if I have sensitive skin?

If you have sensitive skin, we recommend you perform a simple allergy test 48 hours before use. Apply a small sample to the inside of one elbow. Let dry. Do not cover or disturb. If redness, irritation or other skin discomforts occur, please consult your doctor and discontinue use of this product.

Q. What is bronzer?

Bronzer is a make-up that is added to our solution to give an instant tan while spraying with the Sun Gun Easy Spray Formula. The solution is water based and oil free. When using the Bronzing solution there will be a slight residue that may rub off on the inside of clothing. This is water-soluble and will wash out of most clothing.

Q. What kind of colour will I get?

We have 3 different formulas:

Bronzing formula provides a rich, natural color during application, coloring your skin instantly, then darkens into a deep, even, natural tan.

Non-Bronzing formula provides a clear spray that darkens into a deep, dark natural tan after a short time.

Tanning Moisturizer formula provides a clear spray that darkens into a deep dark natural tan after a short time. The Sun Gun Tanning Moisturizer Mist leaves your client feeling incredibly silky soft and smooth.

The **Dark formula** will have the highest percent of DHA while the **Light formula** will have the

lowest percent. The solution oxidizes and reacts with the skin's own cells. The tan develops to a shade to suit your natural coloring whether you are fair or dark skinned. The tan will be darker or lighter depending on the shade you choose. Another way of darkening your tan is to layer.

Q. What is layering?

To achieve the darkest tan possible, you can apply two or more coats of the Sun Gun Sunless Tanning Solution to the body. You want the first coat to be absorbed into the skin before applying a second. We recommend waiting at least 12 hours before applying a repeat application. This will allow the Sun Gun Tanning Solution to develop fully and allow the natural tan to show.

Q. Will it damage my hair?

The Sun Gun product line carries a complete selection of disposable clothing including Hair Caps that will protect your hair. There is nothing in the Sun Gun Solution that will harm your hair. However, if any does come in contact with your hair, wash your hair promptly.

Q. What if I get tanning solution on my clothing?

We recommend that you wear the disposable bras and/or panties that are available in The Sun Gun Product line. However, if you wish to wear your own bathing suit or underwear to achieve "your" perfect tan lines, the solution is water-soluble and will wash out of most clothing. Remember, when using the solution with bronzer, there will be a slight residue that may rub off on the inside of your clothing. This also is water-soluble and should wash out of most clothing.

Q. How long does it take the solution to dry after being sprayed?

The micro misting technology is why the Sun Gun is so revolutionary. The Sun Gun Mist Head sprays a very fine mist of solution all over the body. This mist takes just minutes to dry. Once dry and you feel comfortable, you can leave the salon within minutes of being sprayed.

Q. When can I shower/wash?

Always wait 3 to 4 hours to allow the product to bring out your natural tan. Avoid soaking in a tub for long periods, as it can be very dehydrating to the skin. Most skin specialists recommend showers with a cooler temperature for skin and hair. When drying, ensure you pat yourself dry with a towel, rather than rub, as this will help the longevity of the tan.

Q. What would happen if I went swimming?

Chlorine has a slight bleaching effect on all skin types, whether you are naturally tanned or have used self-tanning products. Always wait 3 to 4 hours to allow the Sun Gun Tanning Solution to bring out your natural tan. Swimming between tanning sessions may cause the tan to fade more quickly.

Q. When should I exfoliate and moisturize?

The maintenance of a sunless tan is comparable to properly maintaining your hair or skin.

Exfoliate: You should exfoliate before you apply the Sun Gun Easy Spray Formula. Our Sun Gun Exfoliate can be used in the shower, concentrating on the hands, feet, knees and elbows.

Before your next session you should exfoliate again. **Moisturize:** You should wait 3 to 4 hours to moisturize after applying so as not to dilute the effect of the Sun Gun Tanning Solution. To keep your tan as long as possible (depending on you're skin type) you should moisturize twice daily to help keep the skin, silky soft and smooth. Our Sun Gun Moisturizer Mist when applied leaves the skin feeling incredibly soft, smooth and replenished with moisture! For new users, we recommend a second Sun Gun tanning session after 3 days to gain maximum results.

Q. How often should I book a Sun Gun session?

For new users, we recommend a second Sun Gun tanning session after 3 days to gain maximum results. To "top up" the tan, we recommend a Sun Gun session every week.
